Bug #	Description of Bug (be specific about what is not working)	Location of Bug (file, class, method, etc)	Steps to Recreate Bug and/or Test Case #	Root Cause Analysis Notes
1	Not all test pass when ran all together,but they work when ran separately	ElectionTestCPL	Run all test	Some test involving ballots fail due to ballots have a static count variable that increments every time a new CPL_Ballot is created changing its id
2	Potential issues with giving out more seats than had, though this is thought to be fixed	distributeSeats() in CPL	run distribute seats after assigning ballots	before was because quota would sometime = 1, but this is thought to be fixed
3	Have to use direct path to run test	ElectionTestCPL	try to run test	I don't know why this happens. The default seems to be right, but it does not work if you do "testCPL.csv" for example. Have to put full path else it cannot find the file
