WEEK 1								
Bring in multiple files into the election system	001	As an election official, I want to be able to bring in multiple files, so that I can bring in different files from different locations.	Loop command argument count and add each argument to an array if the file exists (use exists method)	Started				
			If a file does not exist, display error	Started				
			Make CPL and IR take in multiple files	Not Started				
				Not Started	1 hour	Chiemeka		
Process multiple files into the IRV election system	002	As an election official, I want the IRV files to be processed, so that the IRV election can be run.	Change IR constructor arguement to take an array of files	Not Started				
			Loop n files to call initializeData and poppulateData n times	Not Started				
				Not Started				
				Not Started	2 hours	Phuong		
Process multiple files into the CPL election system	003	As an election official, I want the CPL files to be processed, so that the CPL election can be run.	Change CPL constructor argument to take an array of files	Not Started				
			Loop n files to call populateBallots, populateCandidates, and populateParties n times	Not Started				
			Adjust populateBallots to increase a total ballot count by the total ballots listed in each file	Not Started				
			Change array sizes to total ballot count	Not Started	2 hours	Sidney		
A table that shows each round of the IRV	004	As an election official, I want to see a table that shows each round of the IRV, so that the election results are understood.	Add new function to format and output table	Not Started				
			Add variables to track vote counts for candidates each round	Not Started				
			Add tracking for exhausted ballots	Not Started				
				Not Started	4 hours	Ted		
View what votes are added and what votes are decreased	005	As an election official, I want to view what votes are added and what votes are subtracted for the IRV election, so that I can see the election process.	Track each round's vote total for each candidate	Not Started				
			Calculate vote differences using tracked counts	Not Started				
			Add vote difference to table function	Not Started				
				Not Started	2 hours			
WEEK 2								
Process multiple files into the PO election system	006	As an election official, I want the files to be processed, so that the PO election can be run	Create population functions with array of files as input	Not Started				
			Loop n files to call population functions n times	Not Started				
				Not Started				
				Not Started	2 hours			
Candidate votes are accounted for	007	As an election official, I want candidates' votes to be accounted for so that the integrity of the election holds.	For processing each file, assign ballot correctly to candidate	Not Started				
			In IRV, if vote is not ranked for at least half the candidates, invalidate vote	Not Started				
				Not Started				
				Not Started	2 hours			
IRV ballots to have at least half the candidates ranked for it to be valid	008	As an election official, I want IRV ballots to have at least half the candidates ranked for it to be valid, so that the election maintains its validity.	Change populateData to exhaust invalid ballots	Not Started				
			Exhausted ballots will show -1 as their current vote	Not Started				
				Not Started				
				Not Started	2 hours			
A new file containing all of the invalidated votes	009	As an election official, I want to see a new file containing all of the invalidated votes after an IRV election completes, so that even unused ballots are accounted for.	Create new function to create exhausted ballot file	Not Started				
			Loop through ballots to find any ballots with current vote of -1	Not Started				
			Output exhausted ballots to the new file	Not Started				
				Not Started	1 hour			
The PO election determines a single winner when there are no ties	010	As an election official, I want the PO election to determine a single winner when there are no ties, so I can announce a winner.	Loop through n candidates, using a find largest algorithm to keep track of the highest vote count	Not Started				
			If the current vote count is equal to the highest vote count, keep track with an arraylist (number of ties unknown)	Not Started				
			If there is no tie, declare candidate with the highest vote count from the loop as winner	Not Started				
			Use variable to contain the winner to use when displaying results	Not Started	4 hours			
An unbiased system to break ties for PO election	011	As an election official, I want an unbiased system to break ties for a PO election, so that election integrity is maintained.	Loop through n candidates, using a find largest algorithm to keep track of the highest vote count	Not Started				
			If the current vote count is equal to the highest vote count, keep track with an arraylist (number of ties unknown)	Not Started				
			Call separate function that determines winner using fair coin toss	Not Started				
			Fair coin toss function should generate a random number 1000 for unbiased value for each tie, which ever is closest to another unbiased generated chosen number is the winner	Not Started	3 hours			
The PO election winner and stats displayed on the screen	012	As an election official, I want to see the PO election winner and stats displayed on the screen at the end of the election, so that I can see the results.	Call display() function in Election class	Not Started				
			Write the display() function in PO class	Not Started				
			Print out statements for the election	Not Started				
				Not Started	1 hour			
Run the entire PO election	013	As an election official, I want the PO election to run correctly, so that a winner can be decided	Process files, assign votes to candidates	Not Started				
			Call determine winner/need for a tie	Not Started				
			The previous step determines a winner tie or not	Not Started				
			Display results	Not Started	2 hours			
A GUI to select files	014	As an election official, I want to use a pop-up (GUI) window to select files for processing, so that I can choose the right file(s) for each election.	Google File Choosers for Java, it provides a GUI for navigating the file system	Not Started				
			Resource: https://docs.oracle.com/javase/tutorial/uiswing/components/filechooser.html	Not Started				
				Not Started				
				Not Started	4 hours
